LIFE IDENTITY
IDENTITY AND ACCESS MANAGEMENT

Security isn't just about defending your infrastructure from the latest threats. It also means controlling who has access to IT resources and data, making access fast and simple to authorized users, and effectively blocking unauthorized users. It means having a full complement of Identity and Access Management (IAM) capabilities, including user provisioning, single sign-on, web access management, and life cycle governance. This end-to-end IAM service offloads the complexity and challenges of managing an IAM solution, allowing clients to reduce costs while focusing in-house staff on revenue generating activities. It provides business and technology consulting to help customers develop a clear business driven, strategic roadmap for improving an organization's IAM maturity posture.

LIFE IDENTITY
IDENTITY AND ACCESS MANAGEMENT

Access Management Design and Deployment	Provides consulting and design services to implement more effective access management tools to enforce user access across multiple channels, including mobile, social and cloud.
Multi-Factor Authentication Design and Deploy	Delivers a security rich, token-flexible, centralized authentication infrastructure that integrates existing infrastructure of the organization to help provide end-to-end protection of sensitive data.
Identity and Access Solution Migration	Migrate existing IAM customers to a next-generation IAM solution to ensure a seamless transition, reduced risk and maintained efficiencies.
Identity Governance and Administration Design and Deploy	Utilizes an innovative business driven-approach to identity and access intelligence, including a big data identity warehouse, role and access certification, and analytics dashboard. It strengthens traditional access controls with granular policies across both enterprise and cloud.
Cloud Identity Services	Combines the richness, stability, and maturity of on premise IAM with the agility, cost saving and deployment benefits of cloud. Unlike many competitive cloud IAM services, this offering is extendable and scalable, providing deep functionality for enterprise clients.

LIFE IDENTITY VALUE PROPOSITION

- Improving operational efficiency of on-boarding and off-boarding processes, user self-care password resets, and other requirements.
- Safeguarding privileged users, service accounts, and applications to protect against malicious and/or accidental abuse of access rights.
- Protects aspects of governance failures such as failed audits, separation of duty (SoD) violations and entitlement creep.
- Helps in compliance for timely de-provisioning of users, update of user access rights when they are no longer in the organization or changing their organization portfolio.
